

Science Made Easy

Henry Brouwer

Table of DVD Contents

DVD 1

1. Introduction

- 1.1. Introduction to series
- 1.2. Why do science demonstrations?
- 1.3. Tips for doing science demonstrations
- 1.4. Acknowledgements
- 1.5. Basic lab equipment
- 1.6. Heat sources
- 1.7. Common chemicals
- 1.8. Solvents
- 1.9. Distribution of chemicals
- 1.10. Working with glass tubing

2. Properties of Matter

- 2.1. Compressibility of gases, liquids and solids
- 2.2. Boiling points of water and methanol
- 2.3. Vaporization of water
- 2.4. Melting of Ice
- 2.5. Sublimation of mothballs
- 2.6. Diffusion in gases
- 2.7. Diffusion in liquids
- 2.8. One volume + one volume = two volumes??
- 2.9. Shrinking liquid

3. Properties of Water

- 3.1. Expansion of ice
- 3.2. Lifting an ice cube
- 3.3. Cold ice
- 3.4. Wire through ice
- 3.5. Raising boiling point by adding salt
- 3.6. Floating metal objects on water
- 3.7. Scattered chalk dust
- 3.8. Centering a cork in a glass of water
- 3.9. Adding pennies to a full glass of water
- 3.10. Pouring water along a string
- 3.11. Capillary action
- 3.12. Three become one

- 3.13. Holey nylon
- 3.14. Inverted bottles of water
- 3.15. Coloured streamers
- 3.16. Which contains warm water?
- 3.17. Maximum density of water

4. Density

- 4.1. Introduction
- 4.2. Density of liquids
- 4.3. Density of solids
- 4.4. Volume by displacement
- 4.5. Floating and sinking candles
- 4.6. Regular vs diet Coke
- 4.7. Floating egg
- 4.8. Ice, water and oil
- 4.9. Layered liquids
- 4.10. Non-level liquid
- 4.11. Convection currents in water
- 4.12. Cartesian diver

5. Sound

- 5.1. Sources of sound
- 5.2. Using a tuning fork
- 5.3. Vibrating metal
- 5.4. Dancing salt
- 5.5. Pitch and frequency
- 5.6. Sounding board
- 5.7. Transmission of sound
- 5.8. Sound amplifier using a funnel
- 5.9. Ringing church bell
- 5.10. String telephone
- 5.11. Sound through bone
- 5.12. Listening through a solid
- 5.13. Measuring sound intensity
- 5.14. Resonating air column
- 5.15. Using a slinky to represent longitudinal waves

Science Made Easy

Table of DVD Contents

DVD 2

6. Air Pressure

- 6.1. The plugged funnel
- 6.2. Air occupies space
- 6.3. Dry paper under water
- 6.4. Transferring air under water
- 6.5. Air candle snuffer
- 6.6. Paper seal
- 6.7. Siphon
- 6.8. Perpetual fountain
- 6.9. Collapsing pop can
- 6.10. Collapsing can
- 6.11. Heavy newspaper
- 6.12. Self-filling beaker
- 6.13. Inflating a balloon using reduced pressure
- 6.14. Finger controlled water flow
- 6.15. Air has mass
- 6.16. Fountain in a flask
- 6.17. Egg into a flask
- 6.18. Sticky plungers

7. Heat

- 7.1. Conduction of different metals
- 7.2. Ball and ring
- 7.3. Bimetallic strip
- 7.4. Conductivity of copper and wood
- 7.5. Convection in air – smoke box
- 7.6. Convection in air – pop bottle
- 7.7. Heat and molecular motion
- 7.8. Temperature and heat
- 7.9. Expansion of liquids
- 7.10. Squeezing a glass bottle
- 7.11. Air thermometer

- 7.12. Liquid thermometer
- 7.13. Radiant heat energy
- 7.14. Convection currents in water
- 7.15. Convection in water
- 7.16. Heating water in a paper container
- 7.17. Ice in boiling water
- 7.18. Wire candle snuffer
- 7.19. Burning money
- 7.20. Thermos bottle
- 7.21. Insulation
- 7.22. Expansion of wire
- 7.23. Drinking bird

8. Light

- 8.1. Light sources
- 8.2. Making laser light visible
- 8.3. Transparent, translucent, opaque
- 8.4. Supplies for student activities
- 8.5. Law of reflection (using a laser)
- 8.6. Law of reflection (using pins)
- 8.7. Locating the image in a plane mirror
- 8.8. Reflection using a concave mirror
- 8.9. Refraction (using a laser)
- 8.10. Refraction through a bottle (using pins)
- 8.11. Refraction through a convex lens
- 8.12. Disappearing coin
- 8.13. Apparent depth
- 8.14. Spectrum of white light
- 8.15. Scattering of light: why is the sky blue?
- 8.16. Scattering of light using milk
- 8.17. Optical illusion using two mirrors
- 8.18. Optical illusions

Science Made Easy

Table of DVD Contents

DVD 3

9. Static Electricity

- 9.1. Sticky balloons
- 9.2. Bending a stream of water
- 9.3. Charged objects: attraction and repulsion
- 9.4. Suspended aluminum ball
- 9.5. Jumping bits of paper and aluminum foil
- 9.6. Jumping salt and pepper
- 9.7. Rolling can
- 9.8. Simple electroscope

10. Current Electricity

- 10.1. Measuring an electric current
- 10.2. A lemon cell
- 10.3. Clock powered by an electrochemical cell
- 10.4. Using a magnet to generate electricity
- 10.5. A circuit board: parallel and series circuits
- 10.6. A circuit board for teacher demonstrations
- 10.7. A simple fuse
- 10.8. Conduction tester
- 10.9. Electric heat
- 10.10. Electromagnet
- 10.11. Drawing circuit diagrams
- 10.12. A battery-less flashlight

11. Magnetism

- 11.1. Types of magnets
- 11.2. Suspended magnet: attraction and repulsion
- 11.3. Making a needle into a magnet
- 11.4. Testing for magnetic properties
- 11.5. Magnetic force lines using iron filings
- 11.6. Magnetizing iron filings
- 11.7. Induced magnetism

12. Solutions

- 12.1. Solutions and mixtures
- 12.2. Types of solutions
- 12.3. Rate of dissolution
- 12.4. Unsaturated, saturated and supersaturated
- 12.5. Identification of gas in pop
- 12.6. Amount of carbon dioxide in pop
- 12.7. Concentration of solutions (ppm)
- 12.8. Cleaning dirty water using alum

13. Chemistry

- 13.1. Preparation of limewater
- 13.2. Physical and chemical changes
- 13.3. Foam production
- 13.4. Blowing up a balloon using a chemical reaction
- 13.5. Carbon dioxide as a fire extinguisher
- 13.6. Products of combustion
- 13.7. Phenolphthalein indicator
- 13.8. Invisible ink
- 13.9. Red cabbage indicator
- 13.10. Mystery colour changes
- 13.11. Percentage of oxygen in air
- 13.12. Methanol cannon
- 13.13. Testing common household powders
- 13.14. Oxygen gas from hydrogen peroxide
- 13.15. Hydrogen gas from aluminum foil and drain cleaner
- 13.16. Flubber
- 13.17. Dust explosion
- 13.18. Burning steel wool
- 13.19. Absorbent polymer
- 13.20. Skewered balloon

Science Made Easy

Table of DVD Contents

DVD 4

14. Fluids in Motion

- 14.1. Smoke ring box
- 14.2. Lifting by blowing
- 14.3. Blowing into a Δ -shaped paper
- 14.4. Blow together
- 14.5. Anti-gravity funnel
- 14.6. Filling a large bag with one breath of air
- 14.7. Suspended ping pong ball in stream of air
- 14.8. Water sprayer
- 14.9. Blowing through a bottle
- 14.10. Coloured rings in water
- 14.11. Hydraulics
- 14.12. Transfer ping pong ball

15. Motion

- 15.1. Inertia
- 15.2. Simple examples of inertia
- 15.3. Fresh or boiled egg?
- 15.4. Falling ball and paper
- 15.5. Falling pennies
- 15.6. Water rocket
- 15.7. Alka-Seltzer rocket
- 15.8. Balloon rocket
- 15.9. Radiometer
- 15.10. Rotating water bottle

16. Forces, Work and Simple Machines

- 16.1. Mass and weight
- 16.2. Buoyant force
- 16.3. Magnetic force
- 16.4. Force of friction
- 16.5. Electrostatic force
- 16.6. Centrifugal and centripetal forces

- 16.7. The weird meter stick
- 16.8. Work: a scientific definition
- 16.9. A cart to study work
- 16.10. Inclined plane
- 16.11. Levers: an introduction
- 16.12. First class lever
- 16.13. Second class lever
- 16.14. Third class lever
- 16.15. Law of the Lever
- 16.16. Classes of levers – some examples
- 16.17. Pulleys
- 16.18. Wheel and axle
- 16.19. Screw
- 16.20. Wedge
- 16.21. Obedient can
- 16.22. Balancing nails

17. Earth Science

- 17.1. Day and night
- 17.2. Seasonal changes
- 17.3. Eclipse by the moon
- 17.4. Leaching of soil
- 17.5. Model of a geyser

18. Weather

- 18.1. Cloud formation in a bottle
- 18.2. Measuring air pressure using a barometer
- 18.3. Relative humidity
- 18.4. Hair hygrometer
- 18.5. Dew point
- 18.6. Frost formation
- 18.7. Temperature inversion
- 18.8. Tornado cloud

Files for Printed Materials (DVD 4)

- PM-1 Table of DVD Contents
- PM-2 Summary of all the Demonstrations
- PM-3 Common Chemicals Available Locally
- PM-4 Typical Sound Intensity Levels
- PM-5 Properties of Common Household Chemicals
- PM-6 A Study of Levers
- PM-7 Table to Determine Relative Humidity
